Sorry I had great intentions of emailing.... And then....

Yes, it sounds like many of the lab teams would continue work over the weekend, and share any progress via email. Raj wasn't committed to do anything that I could tell. Cindy and Jennifer said they would continue on path they were on at Ft Meade. One of the groups (REI?) might have some addit results later on Sat (I think, but don't hold me to that). The current lab/Matric said they really couldn't get any lower detections w/o a substantial change in what they were doing, and it didn't sound like anyone at EPA or otherwise recommended that they change course at this time. On the health side we will wait for more info from Dow to see if we can develop a screening number or not, but the labs will keep trying to lower detections in the mean time.

Raj,

Sorry I did not respond earlier today. I was unusually busy with this situation and two others I am involved with. I was on the conference call today until 4 pm so I did not hear the conclusions.

My understanding is that Fort Meade will be working on this over the weekend. I would assume you would need some funding? Please call if you want to discuss but we should confer with Cindy to see if she could use help. If you don't need funding, I would say go ahead and do what you wish...

Let me know, if you like me to develop the ERT capabilities.

Raj

Hi there

As I mentioned, here is follow up from the items I brought up during this morning's briefing:

1. Here is the NTP/NIEHS director contact for OSHA and EPA lab coordination on raw material analyses: Dr. John Bucher, 919 541 4532

2. In discussions with Senator Manchin last night, CDC committed to trying to facilitate communications btwn laboratory experts at EPA (R3? ORD? Denver?) and WV to try to improve if possible the state's detection limit for PPH as soon as possible. Cindy, thank you for carrying this conversation forward on the EPA R3 side. Please let me know if I can help in any way. CDC has reached out to Dow and they have committed to providing any additional info they have available on the tox side (not sure if that also includes analytical side). I will share anything I get in that regard. Could you let me know if EPA can help the state in this regard?

Best Lora

All:

See Lora's email and attached.....

I had to get off yesterday's call early. I guess we have a 9 am call today.... I just got buzzed on my Blackberry.

Jack, could you share with the full 9 am group?

Are we talking today? I have a request to pass along from my HQ/the state related to analytical for PPH.

This apparently is the corrected MSDS for the other material.
